

Available Policies

You can apply policies to iOS and Android apps in your Apperian organization. For an overview of the policies feature, see [About Policies](#). For instructions on applying policies to apps, see [Apply Policies to an App](#).

Policies and Unregistered or Disabled Users

Unregistered Users: You may want to apply policies to an app that will be distributed to users who are not registered with Apperian and do not need the App Catalog on their device. This includes users who install an app through a Direct Install link, a custom-built catalog, or another external system. Not all policies are supported with unregistered users. For more information, see [Manage Policy Settings](#).

Disabled Users: If a user installs an app with policies applied, and that user is later [disabled](#) or [deleted](#), Apperian will block the user from running the app.

Policies and Hybrid Apps

While policies are supported with native iOS and Android apps only, the hybrid apps feature provides a way to also apply policies to web apps. A hybrid app delivers a web app as part of a native iOS or Android app. Therefore, like any other iOS or Android app, you can apply policies to it. For more information, see [Hybrid Applications \(Delivering a Web App as a Native App\)](#).

Apperian Policies

Click on a policy in the table below for more information, including configurable options and a description of the mobile user's experience when the policy is enabled. For more information about dynamic vs static policies, see [About Policies](#).

Policy Name	Dynamic/Static	Works with Unregistered Users
App Usage	Dynamic	Yes
Collect Crash Reports	Dynamic	Yes
Enterprise SSO	Dynamic	N/A - Authenticating the user is the purpose of the policy.
Self Updating App	Dynamic	Yes
Data Wipe	Dynamic	No
Runtime Integrity Check	Dynamic	No
Data Protection Enforcement (iOS apps only)	Dynamic	No
Jailbreak/Root Protection	Dynamic	Yes
App Expiration	Dynamic	Yes
Open Web Page	Dynamic	No
Apple On-Demand VPN (iOS apps only)	Dynamic	No
App Password (iOS apps only)	Static	No
Check Location Services (iOS apps only)	Dynamic	No

Blue Cedar Networks MAP Policies

 The Blue Cedar Network policies are optional and are not part of the standard Apperian platform subscription. Please contact [Customer Support](#) or your Account Representative for pricing and usage information.

If you want to use [Blue Cedar Networks](#) Mobile App Protection (MAP) policies with Apperian, contact Customer Support. For a description of the policies that work with Apperian, see [Blue Cedar Network Policies](#).
