

Send a Notification to a Group

You can send a notification message to members of an App Catalog group. This is a useful way to notify users of changes to an app, or to request a particular action. For example, you may want to recommend that users install an app that was recently enabled in the App Catalog. Apperian sends the message as a push notification. All members of the group who have a native App Catalog (iOS or Android) installed on their devices will receive it; members running a web App Catalog won't receive it.

For an overview of this feature that includes an example showing what a notification looks like on both an iOS and Android device, see [Sending Notifications to Users](#).

To send a notification message to a group of users

1. On the Admin Portal navigation bar, click **Groups**.
2. Click the group name or the **View** link next to the group to display details about the group.
3. Click **Send Notification**.
4. In the **Message** box, enter a message up to 150 characters.
5. Click **Send**.
