

# Apperian App Management

Welcome to the user documentation for Apperian App Management!

Apperian App Management is Arxan's mobile application management (MAM) platform that uses cloud-based software to support the complete mobile app lifecycle by interconnecting backend modules with a unified administrative portal.

## What's New

See [What's New](#) to learn about the latest features and enhancements.

We have removed the "Apperian Documentation Center" landing page that previously appeared when you accessed help.apperian.com.

Rest assured, no content has changed - we're merely doing a bit of reorganizing. You can still use the TOC in the left sidebar or the search up at the top right to find anything you need.

## Get Started

If you're brand new to Apperian, we recommend reviewing the following topics:

- [Introduction](#)
- [Quick Start](#)
- [Managing Applications](#)
- [Developer's Library](#)

Otherwise, use the navigation and search at the left and top of the page to find the info you need.

## Questions?

If you have an urgent request or are experiencing a product issue, contact [Customer Support](#) or submit a ticket via the [Self-Service Support Portal](#).

You can also connect with support engineers and other customers on the [Arxan Customer Support Community](#)!
